SAFEPAK™

PallRun

Smart Applications

It is possible to use PallRuns® in many different ways. At almost all places where there is a need for palletising, the PallRun options exceeds performance of all existing methods of palletising and transport packaging. Their intelligent structure and the recycled raw material used gives excellent water resistance as well as strength to support heavy loads. For correct strength design and testing is done according to the specific application requirements. The PallRun® can be combined with different surfaces such as SAFEPAK® corrugated board, SAFEPAK® honeycomb boards, custom shop displays or can even be attached directly.

Edge Runner

Edge Runner

Applications in different industries

Beverage industry

Shop display tableware

Directly under a box

Paper industry

PallRun

Types

EdgeRunner® - It is a combination of bio-quality edgeboards and PallRuns® made of compact carton board (U-profiles) and stabilization elements (cores). It can replace traditional pallets such as the wooden pallets or the plywood pallets, reducing your packaging material and making recycling easier.

BoxRunner - They have made the handling, transportation and recycling of corrugated boxes easier, faster and more economical. The BoxRunner is light, but at the same time very strong so that it can carry heavy loads.

PallRunner® - It is a direct application of bio-quality PallRuns® made of compact carton board (square-profiles) and stabilization elements (cores). It can replace traditional pallets such as wooden pallets or plywood pallets.

FlatRunner® - Self-adhesive FlatRunner® can easily be placed under any product, box or a display. You can now replace your traditional pallet and start using less material with a strong alternative pallet solution.

SAFEPAK™

Reduce Replace Recycle

Packraft manufactures high quality packaging materials and products. We have forayed into the paper Honeycomb and paper angle-board industry as a result of studying the needs of packing in the near future. Our entire range is now SAFEPAK® range of products and is equipped to meet the needs of packaging at activity centers of transportation and storage. Now supported by our latest paper honeycomb based boards and pallets, our entire packaging range is arguably the best combination of components to get a tailor-made or customized solution to packaging. To meet our commitments to the environment, all our products are either recycled, recyclable and biodegradable or a combination.

A brand new Paper Honeycomb manufacturing plant has been set up in conjunction with the existing corrugation and Paper Angle-board unit where state of art imported machinery is deployed to provide packaging solutions in an entirely new way.

Introducing Slip Sheets

FEATURES:

- Saves costs of chemical treatment
- Easily disposable, hence no cost of return or exchange load
- Resistant to wear and tear, hence economical
- Being lightweight, helps in reduces freight costs

APPLICATIONS:

- It acts as a support device in storage & transportation of products
- It is used in material handling for utilizing space
- Contributes to better use of space in containers & vehicles
